

Xtreme Charge 12V Battery Maintenance Charger Desulfator

Featured Product

- Works with ALL 12-Volt Lead-Acid batteries
- Extends battery life
- Fully-automatic microprocessor controlled technology – voltage AND amperage regulated
- Won't overheat or overcharge the battery
- Reverse polarity protection
- Sparkless operation
- Fuse protected cables

News Articles & Quotes

"I own a motorcycle training company with a fleet of over 50 motorcycles. My company has spent a lot of money on motorcycle batteries over the past few years. After receiving my PulseTech Xtreme Charge, I tried it on roughly 3 year old battery. I tried multiple times to charge this battery with my other charger and it just wouldn't charge. I hooked it up to your charger and the next day it showed a full charge. I was a little skeptical so I put it in one of my bikes and it started immediately. It has been 3 weeks now and the battery is still holding a charge. I love this charger now! It is going to save me a fortune in battery cost. I whole-heartedly recommend this product."

David Tolbert, Motorcycle Training Academy, CO

Q & A

Can I keep the Xtreme Charge connected to my battery all winter long? Yes, keep in mind that under normal conditions a battery will lose 1% of its energy a day while the vehicle sits unused. That means it will not take long for a battery to become completely discharged. The XC will not allow the battery to lose energy and will maintain it indefinitely, even months at a time.

What makes the Xtreme Charge different than the other maintainers on the market? The XC will charge a battery then go into float mode to keep it charged. It continually monitors the battery and will automatically re-charge it if needed. It also pulses the battery to increase its reserve capacity and equalize the cells to make it stronger and last much longer. No other charger in the world includes this Pulse Technology or is as intelligent as the Xtreme is.

What voltage windows is the Xtreme Charge Quick Battery Tester set at to determine 25%, 50%, 75% and 100% charged?

25%: 9.8 to 12.0V	50%: 12.0V to 12.4V
75%: 12.4V – 12.6V	100%: 12.6 – 13.8V

Specifications

Electrical

Input Voltage: 110-240 VAC

Input Frequency: 50 - 60 Hz

Output Current: 2.5 Amps DC Maximum

Min. Voltage for Startup: 7 Volts

Output Voltage, Bulk Charge: 14.8 VDC

Physical Characteristics

Dimensions: 7.90" L x 3.50" W x 2.20" H

Weight: 1.53 lbs.

Shipping Weight: 2.41 lbs.

Enclosure: ABS Plastic Rated 94-V0

Power Cord Length: 6 ft.

Main Battery Cable Length: 6 ft.

Lug/Clamp Cable Length: 2 ft.

Indicators

Power On, No Connection,
Bad Battery, Pulsing,
Charging, Test

Battery State of Charge:

25%, 50%, 75%, 100%.
